HOW TO TAKE YOUR MEDICATION

The drug regimen we recommend to you following endodontic treatment is designed to prevent pain and/or swelling. For this reason, it is important to follow these instructions whether or not you experience any discomfort.

Recommended schedule and dosage:

- * _____ mg Ibuprofen (Advil _____ tabs) every 6 hours

- * 2 extra strength tylenol 3 hours after each ibuprofen

- * Continue this course of analgesic medication for 48- 72 hours

- * If antibiotics are prescribed, take as directed on bottle

Please call our office at any time with any questions you have regarding pain and this pain prevention regimen.
